

To Whom It May Concern,

From an AML transaction-monitoring perspective, the automated risk-scoring framework developed in Natalja Krjuckova's Master's thesis, "Automated Risk-Scoring Framework for Financial Institutions", represents a sound and practically applicable approach to suspicious transaction detection under realistic operational constraints. The framework's modular design and scenario-based synthetic data methodology align with common compliance requirements, supporting the evaluation of detection models.

Sincerely,

Māris Krastiņš, CAMS, CGSS

Group AML Officer, Intrum AB
